

FREEZER PACKS -10°C (+14°F)

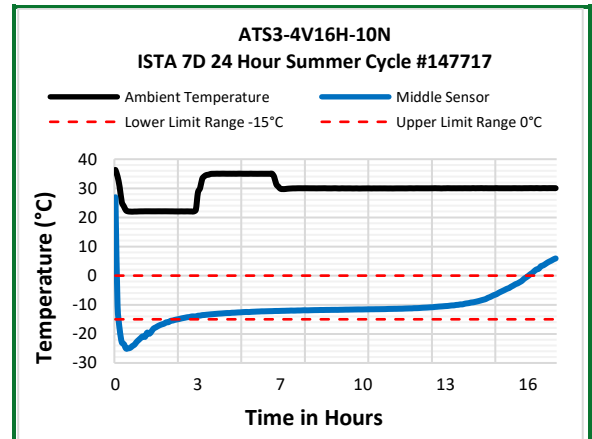

savENRG® Freezer Packs are made with non-toxic, inorganic, and non-flammable Phase Change Material PCM-HS10N. These Freezer Packs are a safe alternative to dry ice, keeping biological, diagnostic, and clinical trial specimens frozen in the -10°C to -5°C (14°F to 23°F) range.

Features:

- Water based, safe and reusable alternative to dry ice.
- Engineered to freeze and thaw specifically at -10°C (+14°F)
- Suitable for commercial applications
- Encapsulated in flexible pouches or rigid HDPE bottles.

Application:

Maintain frozen payloads below -5°C (+23°F) for transportation of frozen biological specimens, plasma, and vaccines

Standard Product Range for savENRG® Freezer Packs
